

Executive Decision / Market Regime

VERDICT CONDITIONAL — descriptive state only

GS Evidence Table

FACT: bgd_th and bgd_thih are dated through 2026-08-14. The raw sheets retain 94 rows; bgd_year retains a 220-row rolling window.
OBSERVATION: breadth recovery into 2026-07-31 remains broad on 2026-08-14.

Interpretation

HYPOTHESIS: breadth plus EMA direction can label a short-horizon state; it does not validate durable return or exposure sizing.

CIO Action

Hold Phase 3. Use as situational context only; do not set exposure or expected return from this proxy.

Market Turning

VERDICT **CONDITIONAL** — D+5 proxy impulse; durability unproven

GS Evidence Table

FACT: source bgd_thih, columns ending _idx_ema5diffn, focus dates 2026-07-24 / 07-31 / 08-14.
VALIDATION: Order 128 found a reproducible sequence but unfavorable D+10/D+20 proxy durability.

Interpretation

OBSERVATION: the breadth trough-to-expansion pattern is visible. This is not actual market-return evidence.

CIO Action

Monitor the sequence; require qualified KOSPI total-return data before promotion.

Sector Leadership / Rotation

VERDICT REJECT — continuation and rotation-leading rules

GS Evidence Table

FACT: kidx-Q/kidx-W and bgd_thih raw sector values are plotted for Robot, Robot2, Optic, front-end and electronic parts.
VALIDATION: H-LEAD-01 and H-ROT-01 remain REJECT from Order 128/130.

Interpretation

OBSERVATION: cross-window rank/level differences describe current rotation candidates, but do not establish forward investable leadership.

CIO Action

Do not chase or size positions from Q/W alignment. Treat named sectors as a watchlist only.

Sector Turning / Sector Risk

VERDICT UNVERIFIED turning; REJECT simple risk precursor

GS Evidence Table

FACT: sector EMA and Q/W sheet-level proxies exist. Point-in-time membership and constituent adjusted returns do not.
VALIDATION: Entry/Build/Exit and Sector Turning remain UNVERIFIED; simple H-RISK-01 remains REJECT.

Interpretation

HYPOTHESIS: constituent breadth and effective-dated membership may distinguish true turns from proxy mean reversion, but current data cannot test it.

CIO Action

No Entry/Build/Exit instruction. Require effective-dated membership and constituent return history.

Stock Head-Up / Today's ATI Playbook

VERDICT WATCHLIST ONLY — no stock-performance inference

GS Evidence Table

FACT: kr_idx is a current 98-row, 3-column group/symbol/weight snapshot without effective dates. kidx-mmt is supporting-only; etf_idx is excluded from weighted inference.

Interpretation

OBSERVATION: current constituents can identify names associated with focus sectors, but cannot support historical or forward strongest-stock claims.

CIO Action

Track breadth, Robot/Robot2/Optic/front-end/electronic-parts raw states. No exposure sizing, expected return, or trade order.

Confidence / Validation Status

VERDICT PHASE 2/2B COMPLETE; PHASE 3 HOLD

GS Evidence Table

FACT: six live GS MCP payloads were snapshotted with byte/content parity evidence and SHA-256 checksums. Embedded chart export is not exposed, so charts use raw values.
VALIDATION: REGIME/TURN conditional; LEAD/ROT/RISK rejected; Sector Turning/Entry/Build/Exit unverified.

Interpretation

Confidence is limited by one recent regime, proxy outcomes, current-only constituents, and missing qualified return lineage.

CIO Action

Next valid step is immutable market/sector total returns plus effective-dated membership and constituent adjusted prices.
